**Gro-Sod.** F. H. Woodruff & Sons have found that an analysis of 10-6-4 feeds grass properly throughout the growing season. Nitrogen, the fertilizer element that induces luscious green leaf growth, predominates in this fertilizer. One pound of Gro-Sod

is required for each 100 sq. ft. of lawn area, or 500 lbs. per acre. A fertilizer distributor will do an even, economical job. 25 lbs. \$2.20; 50 lbs. \$3.90; 100 lbs. \$7.75.

## Plant White Clover with Grass Seed

For sunny locations we recommend using 5 to 10% White Clover in a grass seed mixture. It stays green in dry weather and it helps to crowd out crab grass. For best results use the new Wild White Clover, which is more compact and much more durable than the Common White Clover.

**Wild White Clover.** Lb. \$2.50.

**Common White Clover.** Lb. \$1.50

Spike Roller

A Spike Roller perforates your lawn area, thereby allowing air, moisture and plant food to reach the roots. In dry weather spiking is beneficial because it keeps the soil porous and open.

## SELECTED GRASSES AND FIELD SEEDS

Prices on separate grasses and field seeds are subject to market fluctuations and therefore are subject to change without notice.

**Illahae Creeping Red Fescue.** A permanent lawn grass that is particularly adapted to the shade. It spreads from the roots, making a dense turf which tends to crowd out weeds. Because of its deep roots, it is capable of standing dry weather. Grows well in sunny areas also. Lb. \$1.75; 10 lbs. \$17.00; 25 lbs. \$40.00.

**Kentucky Blue Grass.** Used mostly as a lawn grass. A permanent type of grass that produces dense, tough sod of a deep green color. It is slow in becoming established. Lb. \$1.20; 10 lbs. \$11.50; 25 lbs. \$25.00.

**Fancy Red Top.** A nurse grass that lives about three years on turf kept cut. It gives a fine texture the first year of growth and then becomes quite coarse during the second and third years. It makes quick growth, and nurses the permanent grasses until they become established. Lb. 90 cts.; 10 lbs. \$8.50; 25 lbs. \$20.00.

**Timothy.** A tall-growing Meadow Grass used mostly for hay and pasture. Grows quickly. Lb. 35 cts.; 10 lbs. \$3.25; 25 lbs. \$7.50.

**Colonial Bent.** This permanent grass, very fine in texture, is similar to that used on putting greens. Spreads rapidly by creeping underground roots. Requires close cutting and plenty of moisture. Lb. \$1.75; 10 lbs. \$17.00; 25 lbs. \$40.00.

**Domestic Rye Grass.** Also known as Common Rye Grass. A quick grower often used in lawn grass seed mixtures as a nurse grass to prevent the soil from washing. Lb. 35 cts.; 10 lbs. \$3.00; 25 lbs. \$6.25.

**Orchard Grass.** A field grass used in pastures and meadows. Lb. 65 cts.; 10 lbs. \$6.00; 25 lbs. \$15.00.

**Perennial Rye Grass.** A short-lived perennial lasting three to four years. Used as a nurse grass in lawn seed mixtures and also in meadow mixtures for hay and pasture. Good for a temporary lawn. Lb. 45 cts.; 10 lbs. \$4.25; 25 lbs. \$10.00.

**Poa trivialis.** Rough-stalked Meadow Grass. This variety of Blue Grass is available again. Thrives in shaded lawn areas. Deep green in color. Lb. \$1.25; 10 lbs. \$11.50.

**Italian Rye Grass.** A good temporary grass to grow in shaded areas. It is coarse in texture, like the other rye grasses. Lb. 40 cts.; 10 lbs. \$3.75; 25 lbs. \$8.75.

**New Zealand Chewing's Fescue.** A permanent grass particularly adapted to the shade. The blades are very fine and wiry and are gray-green in color. Its deep roots and tough texture makes it a very hardy and durable grass. It will also grow in sunny areas. Lb. \$1.75; 10 lbs. \$17.00; 25 lbs. \$40.00.

### Meadow Grass Mixture

An ideal mixture for meadows and pasture. Use 50 lbs. per acre. Contains Timothy, Perennial Rye Grass, Orchard Grass, and Red Clover. Lb. 75 cts.; 10 lbs. \$7.00; 25 lbs. \$16.50; 100 lbs. \$65.00.

# Grow Your Own Vegetables

## THOSE FRESH FROM YOUR GARDEN TASTE THE BEST

Children love to see things grow. In the above garden, Maureen McArdle enjoys cultivating her Daddy's vegetable garden.

### Vegetables to Start Early Indoors

Vegetables that can be started indoors or in the hotbed are: Artichokes, Broccoli, Brussels Sprouts, Cabbage, Cauliflower, Celery, Eggplant, Leek, Lettuce, Parsley, Onions and Tomatoes. February 15 to March 15 is time enough for most of these vegetables. The seed may be started in flower pots, using the new sterile medium, Vermiculite, rather than soil. Individual varieties should be kept separate in each pot. The pots require less space than flats and may be handled much more easily. To insure against damping off, mix Semesan with the seeds at time of planting. When the seedlings are ready to be moved, they may be transplanted into flats or directly into the hotbed.

### Asparagus

Plant as early in the spring as the soil can be prepared. Dig a trench a foot wide and as deep; put in several inches of decomposed stable manure or use 5 pounds of a complete fertilizer and 10 pounds of hydrated lime for each 50-foot row. Cover fertilizer with soil and set the roots 8 inches below the surface of the trench. Space them 18 inches apart, with 3 feet between rows. Cover roots with several inches of soil and firm each root well; as the shoots grow, the trench can be filled in with soil. The secret with Asparagus is abundant fertility.

★**Mary Washington.** Thick, dark green shoots with purplish tips. Best results come from planting three-year-old roots in early spring. \$7.00 per 100. We also offer 2-year-old roots at \$5.00 per 100.

### Artichoke

### Avoid Trouble With Lima Beans

#### Use Spergon

Do not plant Lima Beans too early. We recommend waiting until the weather is really warm and settled. This would be about June 1 around Greenwich and vicinity. To insure good germination of Limas, treat seed with Spergon, the new seed disinfectant. Simply mix Spergon with seed at time of planting. This advice may save you from making a second planting. In Greenwich and vicinity this is usually between March 15 and April 15. These are the extra-early or hardy vegetables and are frostproof, so to speak.

## Flowers To Plant Early Indoors

Some annuals that can be started indoors or in the hotbed are: Dwarf Dahlias, Asters, Alyssum, Verbenas, Petunias, Carnations, Salvias, Nicotiana, Ageratum, Sweet Peas, Snapdragons, Lobelias, Phlox Drummondii, and Stocks. The seed may be started in flower pots or even old coffee cans provided they are properly drained; use the new sterile medium, Vermiculite, rather than soil. Individual varieties should be kept separate in each container. Such containers require less space than flats, and may be handled much more easily. Set the container in a saucer or similar receptacle which is constantly filled with water. The pot automatically soaks up the amount of moisture required. To insure against damping off, mix Semesan with the seeds at time of planting.

## An Expert's Spray Formula for Roses

Edward J. O'Keefe, a noted rose grower of White Plains, N. Y., recommends the following spray formula for roses:

One tablespoonful Wettable Sulphur, one tablespoonful Fermate, one teaspoonful Nicotine Sulphate and two tablespoonfuls 50% Wettable DDT, to be diluted in 1 gal. water. In addition, Dupont Spreader and Sticker should be used to make the spray material adhere to the foliage.

The Wettable Sulphur controls powdery mildew and brown canker; the Fermate controls black-spot; the Nicotine Sulphate controls aphids and other sucking insects, and the DDT controls beetles and other leaf-eating insects.

These materials may be found listed on pages 42 and 43 in this catalog.

## Perennial and Biennial Flower Seeds

Many hardy perennials and biennials (plants that require two years to produce bloom, after which they set seed and die) are easily grown from seed. An important thing to remember is that seed should be started as early as possible in order to develop good-sized plants which will winter over easily. Seedlings of most perennials can be carried over winter with the protection of a light mulch. Most biennials, however, require covering or wintering in a coldframe, especially in exposed areas. Raising your own plants from seed is an easy and inexpensive way to develop a perennial border.
